

SOLAR

In our world today the need for clean reliable energy has been brought to the forefront, not only within our own country, but worldwide! With the concern over global warming, the high cost of energy and the benefits of clean air to our health, solar energy has become the number one solution to these challenges in our society today. Neal electric has seen the need to shift towards the use of solar power and has become an experienced partner in the photovoltaic market throughout the Southern California region.

CORE CAPABILITIES

- Electrical contracting for 25 years in the Southern California
- An experienced partner in solar installations that you can trust
- A team of project managers who know what it takes to complete solar projects on schedule and within the budget of our customers
- A yearly average of over 300 highly trained (California State Certified) electricians who are building code experts
- Neal electric has a “Can Do” culture which encourages our customers to build lasting relationships as we continually partner up from project to project
- Safety is of the utmost concern, especially on our solar projects where there are unique safety considerations. Neal Electric places safety as it's number one priority and has a safety record which reflects this.
- Quality control that insures our installations are both safe and professional

PRECONSTRUCTION SERVICES

Our Production Services Department is a resource for all our solar projects as they provide added value through;

- Design assist process with the solar design engineers
- Integration of the solar distribution conduit system in both new and existing facilities
- Upfront coordination to eliminate constructability issues and avoid delays or adding additional cost to the project
- 3D CAD coordination drawings to make sure that all of the components of a project fit together as a unit and stay within the limits of the structure
- Prefabrication shop which allows for off site assembly and immediate installation upon arrival to the project, saving valuable space on site and accommodating aggressive schedules
